

During the last decade, ERC has become essential for the scientific capacity building within the European universities. The ERC-research initiatives are characterized by the search for bright ideas, independent thinking, scientific excellence, leading to theoretical as well as application oriented results, easily accessible and transferable to younger generations. Thanks to this approach, ERC contributes substantially to the strong position of the European universities in the worldwide competition. Together, ERC and universities are building a promising future in frontier research, which will be vital to secure our prosperity and long term competitiveness of our European society. Now, more than ever, a strong ERC is the best guarantee for a strong EU with healthy citizens, a thriving economy and a strong social ecosystem.

Prof. Reine Meylaerts
vice rector of Research Policy
